Enhancements

Personnel Offboarding

We've implemented various new features designed to streamline and enhance the personnel offboarding experience for projects.

Bulk Removal of Confirmed Personnel

The first addition involves extending the capabilities of the 'view all roles' function. Currently, when the user clicks on the 'view all roles' button, the system automatically selects and displays all personnel records within a given project.

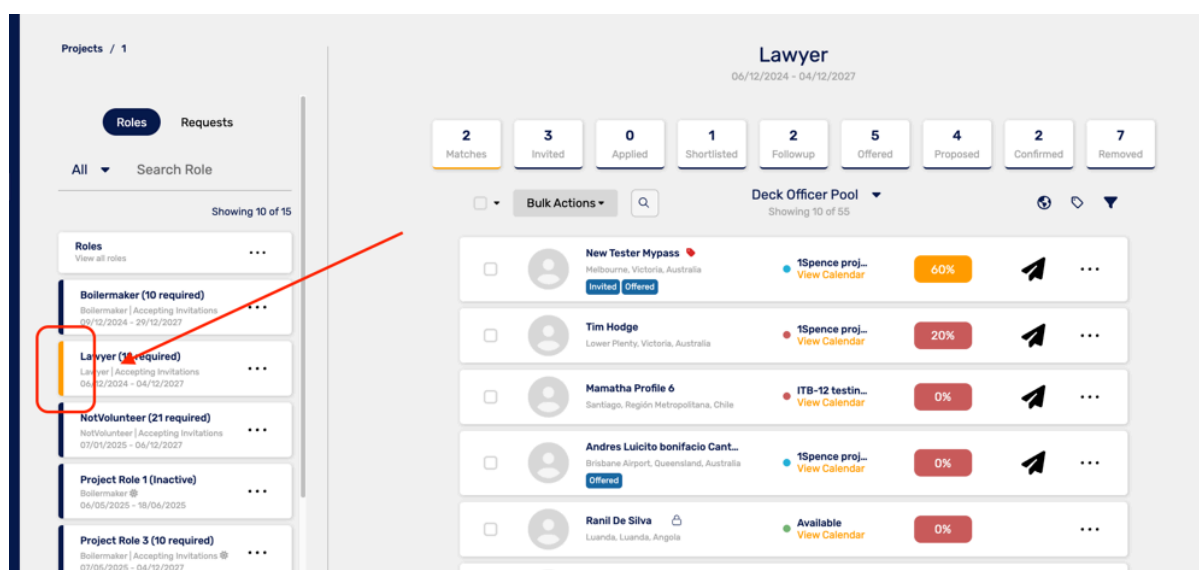

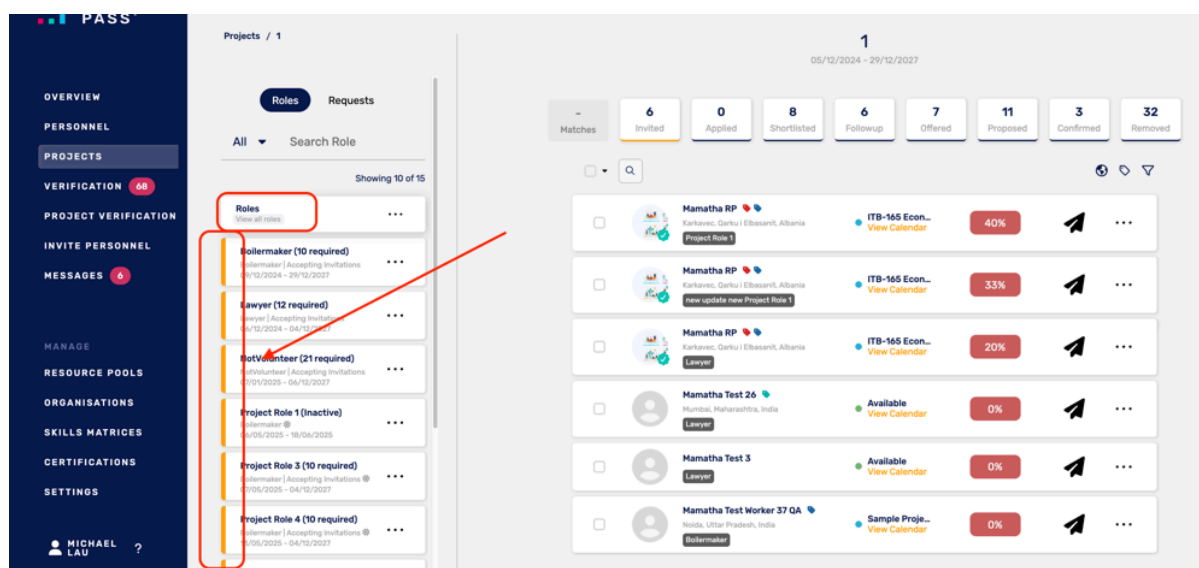

Here, with the new bulk remove feature, MyPass now enables users to select and offboard multiple **confirmed** personnel across different roles simultaneously (e.g. removing personnel A from Role A, and Personnel B from Role C). This significantly reduces manual effort and accelerates the offboarding process.

UI Touch-up: Improved Role Selection Clarity

As shown in the screenshot below:

- When you select **'View All Roles'**, an **orange bar** will appear on all the role cards beneath it, indicating that every role is chosen.
- If you select **just one role**, only that individual role will display an **orange bar**, showing it's the sole selection.
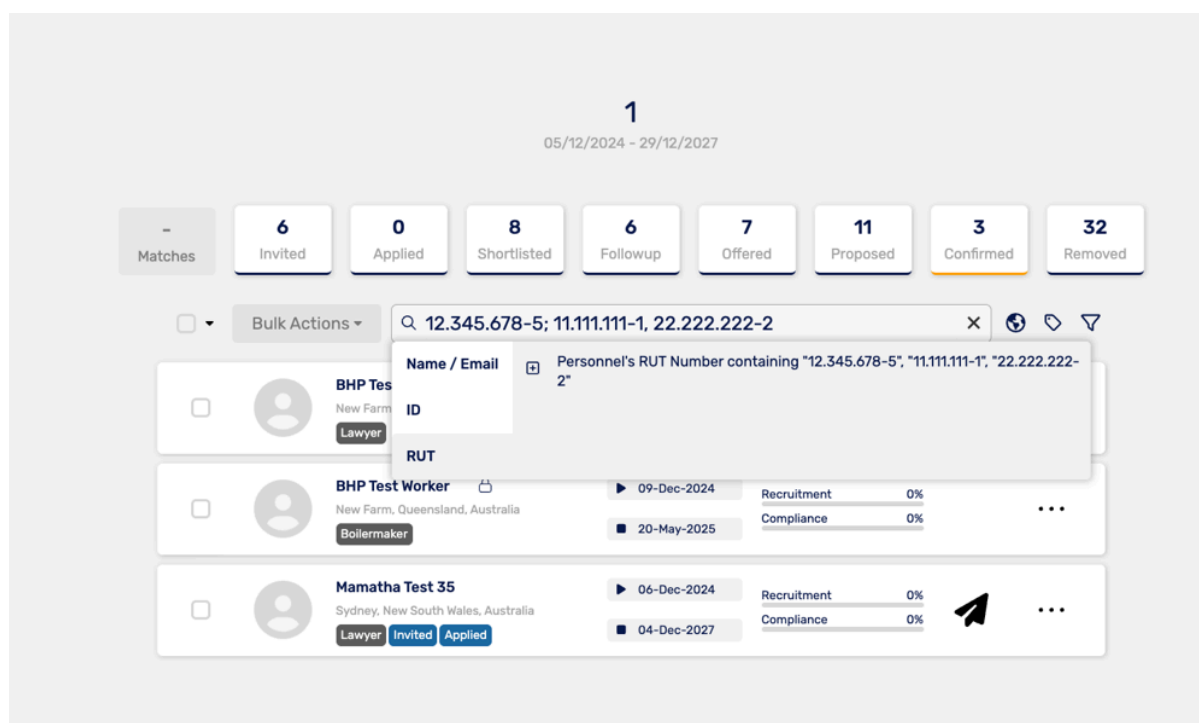

This enhancement aims to provide immediate visual feedback on your role selections, making your experience more intuitive.

Enhanced Filtering Capabilities - Search by Multiple RUTs

Users will be able to input a list of RUT numbers directly as a search term (separated by a comma or semi-colon, allowing them to quickly locate and offboard personnel)

- This is available for all recruitment stages; regardless of viewing all roles or viewing a single role

These enhancements will significantly improve efficiency, by enabling faster and more targeted management of offboarding tasks.

Career Pathways Page Performance

Reduced the amount of information transmitted to Career Pathways pages in the Digital Skills Passport, eliminating unnecessary data and decreasing load times for a faster user experience.

Bug Fixes

Green Tick Now Shows for Valid Certificates in Career Pathways

Within Career Pathways, the green tick indicator is now correctly displayed for individual valid certificates that are nested within Requirement Groups.

Unable to Update Personnel Engagement Date for Roles Without End Dates

For roles that do not have an end date, users can now update the associated personnel's engagement dates, without having to provide an engagement end date
